Running KeyUp (Updating Your Keymark Software)

1. Make sure you are connected to the Internet. If you have a permanent connection through your network, you should be able to run KeyUp™ immediately after your computer reboots. If you are not connected to the Internet (perhaps because you use a dial-up connection), click the Exit button on the KeyUp™ window, connect to the Internet as you usually would, and then start KeyUp™ again by double clicking on the KeyUp™ icon in the KeyBuild® folder on your desktop.
2. Type in your Registration Number (shown below). You will need this number to run KeyUp and to log in to the Members Only area of our website. Keep this number in a safe place!

3. Click the Get Files button (KeyUp will show you what's new. Do not check or uncheck any items.)
4. Click the Get Files button again (KeyUp will download the required files).
5. Wait for the software to download, and then click the Exit button (the files that were marked as NEW will no longer have that notation next to them when they are finished downloading).
6. Click the Install button on the main KeyUp™ window (KeyUp will show you what it has downloaded. Do not check or uncheck any items).
7. Click the Install button (Do not check or uncheck any items).
8. Wait for the software to install (the "NEW" marks will disappear from each type of file when it is finished), and then click the Exit button.
9. Exit out of KeyUp™.
10. Open "KeyBuild Wood" from Desktop
11. Double Click on "KeyBeam". The software will automatically run security and then start up.
