

Bringing Nature's Resources Home.

Harvested on 2 million acres of sustainable northern forests, the black spruce tree provides the natural source for Nordic's engineered wood products.

Nothing is wasted. An exclusive ENVIRO=LAM™ technology yields more valuable fiber from every tree.

Fiber is optimized in a state-of-the-art manufacturing facility where rigorous quality control standards ensure end-product consistency. Only MSR wood fiber is used in our products.

Nordic Joist and Nordic Lam products are delivered throughout North America. Nordic provides the dependability and reliability business partners seek in long term solutions.

Workable, versatile, compatible, economical and light in weight, builders find Nordic products easy to install using conventional carpentry tools.

Home owners are rewarded with a lifetime of comfort and satisfaction.
